Signs & Symptoms in Confirmed Cases

Graph 1

Graph 1 shows the incidence of signs and symptoms reported in documented symptomatic confirmed cases. Cases that have no symptoms documented or are documented asymptomatic are not included. We have combined fever (documented >100.4) & subjective fever. This is due to recognizing that everyone does not own a thermometer and therefore cannot give an actual temperature to flag the indicator. We are hoping these changes will provide a clearer picture regarding symptoms present.

Count of Confirmed & Probable Cases by Age Group in Stark County

Graph 2

Graph 2 shows the cumulative number of laboratory-confirmed and probable cases by age group. There are 16 probable cases and 13 confirmed cases in which date of birth is currently unknown and not shown in graph above.

EPIDEMIOLOGICAL REPORT ON COVID-19

Graph 3 shows a breakdown of confirmed cases by week by age groups. There are 13 confirmed cases in which date of birth is currently unknown and not shown in graph below. As with all data contained in this report, caution is advised when looking at the past 2-3 weeks of data due to delays in testing results.

EPIDEMIOLOGICAL REPORT ON COVID-19

Weekly EpiCurve of Confirmed COVID-19 Cases in Stark County by Illness Onset
Graph 4

Graph 4 shows the EpiCurve which displays the total number of laboratory-confirmed cases per week, based on the illness onset date for Stark County. If the illness onset date is not available, the earliest known date is utilized, which could be the date the specimen was collected, the date of the test results or the date reported to the local health department. Counts will change as additional information is collected. Stark County's first confirmed case reported an illness onset date of 2/25/2020.

This data only includes data up until 11:30 am on 1/15/2021.

To help highlight short-term daily changes, Graph 5 shows daily counts of laboratory confirmed cases for a 21-day period.

Count of Deaths in Confirmed Cases by Week
Graph 6

Graph 6 is a breakdown of death counts in laboratory-confirmed cases by week in which the death occurred. Includes only deaths reported to the local health department as of 11:30 am on 1/15/2021. This isn't an automated process which is why it may be a week or longer for a death to be documented.

Count of Deaths in Confirmed & Probable Cases by Age Group
Graph 7

Graph 7 shows the breakdown in deaths in confirmed and probable cases by age group. Additional age groups will be added as needed.

Graph 10

Graph 10 is the count of confirmed cases closed or closed due to death. Stark County has a total of 7943 cases closed of which 369 are due to death.

Cases can be closed for the following reasons:

Confirmed Cases Linked to a Known Cluster
Graph 11

A cluster is defined as 2 or more cases with a common time and place of exposure. In Stark County, commonly these are work place, congregate living or family event/party settings. Additionally, cases that were exposed to original case members of the cluster and they subsequently became ill are also then linked to the original cluster.

We have removed the graph associated with health care workers and long-term care facilities. For more information on long-term care facilities including breakdown by facility and by resident/staff, please visit:

Confirmed

- Meets confirmatory laboratory evidence. NOTE: Asymptomatic infections are reportable as confirmed cases.

Probable

- Meets presumptive laboratory evidence AND was reported on or after November 1, 2020; OR
 - o For reports received prior to November 1, 2020: meets presumptive laboratory evidence AND either clinical criteria OR epidemiologic linkage; OR
- Meets clinical criteria AND epidemiologic linkage with no confirmatory laboratory testing performed for SARS-CoV-2; OR
- Meets vital records criteria with no confirmatory laboratory evidence for SARS-CoV-2.

Counts and rates are based on date of illness onset. If onset date is unknown, the earliest known date is utilized. Any rates based on counts less than 10 are considered unreliable and caution should be exercised when interpreting. Due to testing restrictions, data may be skewed.
